#ASTERION TURNS ON

A wide model range, latest production technologies, reasonable price, all this together guarantees the maximum pleasure from every trip with ASTERION. The range of our starter batteries allows us to provide each type of motor vehicle with the suitable accumulator battery. This catalogue includes about 9 thousand models of motorcycles and jet skis, scooters, snowmobiles, quads and other vehicles, and each of them has its own accumulator battery from the CT and EPS model ranges.

ASTERION CT

an ideal partner for the urban motorcyclist.

The widest model range, including accumulator batteries with capacity from 2.5 Ah to 30 Ah, will allow you to choose the most suitable accumulator battery for any kind of two-wheeled motor vehicle - from a scooter to a superbike. AGM technology provides exceptional performance and cycling stability for any riding style, as well as the usability of the accumulator battery in any position.

ASTERION EPS

suitable for fans of extreme and off-road driving, as well as for the most powerful motors.

An EPS accumulator battery will start the engine at temperatures down to -50 degrees. NANO-GEL technology provides vibration resistance and tightness, reinforced terminals withstand the highest crank currents. ASTERION from EPS series provides up to 100% higher cold cranking amps and 4 times higher charge/discharge cycle stability than conventional charged accumulator batteries.

IN THE CITY OR OFF-ROAD, IN THE SNOW DESERT, OR ON THE COASTAL WAVES, ANYWHERE ON YOUR WAY IF YOU CHOOSE ASTERION, YOU CAN BE SURE OF RELIABLE STARTING OF THE ENGINE AND PROBLEM-FREE OPERATION OF YOUR ACCUMULATOR BATTERY.

SERIES

CT

ASTERION CT series lead-acid accumulator batteries are manufactured using AGM (Absorbent Glass Mat) technology especially for systems where multiple powerful discharge is used.

They meet international safety standards and are recommended for use in motorcycles, scooters, jet skis, quads, ATVs, as well as in gasoline and diesel generators. ASTERION CT series accumulator batteries - is the guarantee of attractive price, excellent performance and high reliability.

SCOPE OF APPLICABILITY

- Motorcycles
- Scooters
- Quads
- ATVs
- Jet skis
- Snowmobiles
- Hus-Skis
- Diesel and gasoline generating units

GENERAL FEATURES OF ASTERION CT ACCUMULATOR BATTERIES

AGM technology

Sealed

Vibration resistant

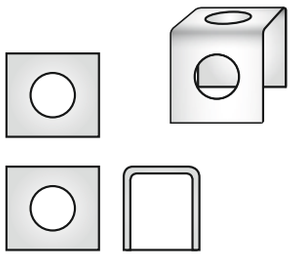
Maintenance-free

Increased starting currents

Operation in any position

High quality ABS plastic housing

TERMINAL DIAGRAMS



Bolt + nut

SELF DISCHARGE: Less than 3% per month

Continous float charge voltage: 14.4 - 14.8 V

SERIES

EPS

The ASTERION EPS (Extreme Power Series) starter accumulator batteries are sealed, maintenance-free lead-acid batteries manufactured with the use of the NANO-GEL technology especially

for two-wheeled motor vehicles with high energy consumption. The EPS series is created to start engines in extreme temperature conditions as well as for the most powerful motors with high energy consumption.

SCOPE OF APPLICABILITY

- Motorcycles
- Quads
- Jet skis
- Snowmobiles

GENERAL FEATURES OF ASTERION EPS ACCUMULATOR BATTERIES

NANO-GEL technology

Highest starting currents

Deep discharge resistant

Longer service life

Extended storage period

Special reinforced terminals

Sealed

Vibration resistant

Operate in any position

High quality ABS plastic housing

APPLICABILITY:

- For starting engines in extreme temperature conditions
- For diesel engines
- For large engines
- For intensively operated two-wheeled motor vehicle engines

TERMINAL DIAGRAMS

USEFUL TIPS FOR USE OF DELTA ACCUMULATOR BATTERIES FOR TWO-WHEELED MOTOR VEHICLES

WE WISH YOU TO HAVE A GOOD TRIP AND TAKE PLEASURE OF SPEED!

AND TO USE OUR ACCUMULATOR BATTERY AS LONG AS POSSIBLE – BE SURE TO READ AND FOLLOW THE OPERATING RULES.

1. Read this manual and your vehicle's manual carefully.

2. When purchasing an accumulator battery, make sure that it meets the requirements of your vehicle's technical passport.

3. Install a new accumulator battery and be sure to fix it in the standard mount. Pay particular attention to the polarity of the accumulator battery. Connect the accumulator battery starting from the «plus» terminal and tighten the terminals with the fixing screws. The accumulator battery must be disconnected in the reverse order.

4. The starter is started by short turns of 3-5 seconds. Do not allow the accumulator battery to discharge by long operation in the starter mode (more than 10 seconds and more often 2 times/min, more than 10 simultaneous attempts). If the engine does not start, refer to the vehicle operating instructions or to a car service. Never discharge the accumulator battery completely

5. Check the accumulator battery fixation in the socket, the reliability of the contacts and wiring terminals and the cleanliness of the contacts at least 2 times a month.

6. Keep the accumulator battery surface clean and free from moisture (ice).

7. In case of long interruptions in operation (more than one month), it is necessary to recharge the accumulator battery to 100% of power level.

8. Monitor the correct operation of the vehicle's on-board electric system and its elements.

9. If a malfunction of the on-board electric system is detected, when the operating parameters of the accumulator battery exceed the maximum permissible limits, as well as in cases where the user has doubts about the correct operation of the accumulator battery, please contact a specialist in order to find and eliminate the causes of the malfunction. If it is determined that the cause of the accumulator battery failure has occurred through the fault of the manufacturer or the seller, the accumulator battery will be replaced with a new one.

10. Operation of batteries on vehicles is allowed only if the electrical equipment is in good working order and the charging voltage for accumulator batteries is 14.4 V (maximum allowable is 14.6 V at 20 °C), and if the fault current does not exceed 15 mA. Exceeding the maximum allowable voltage will damage the accumulator battery (accumulator battery power and life will reduce).

11. DELTA accumulator batteries are sealed. Opening is strictly prohibited, as this will destroy the accumulator battery.

12. At 100% accumulator battery charge, the voltage at the accumulator battery terminals should not exceed the maximum allowable value of 14.4 V without load and be less than 13.5 V with load (high beam on) at 2500 rpm of the engine.

13. Disconnect the accumulator battery before long-term parking of the vehicle (more than 1 month). Fully charge the accumulator battery before storing. Storage uncharged will damage the accumulator battery, and this will not be covered by the warranty. It is optimal to store the accumulator battery in a dry place far from direct sunlight at temperatures between 0 °C and 25 °C.

14. Avoid deep discharge of the accumulator battery (below 12 V), that can be caused by the following actions: vehicle energy consumers were not switched off by the user, short circuit in the vehicle circuit, malfunction of the accumulator battery charging circuit, when the voltage in the vehicle charging system is less than 14 V.

15. If the vehicle with correct operating on-board electrical system is used in normal mode, additional recharging of the accumulator battery is not required.

16. The accumulator battery temperature before charging must be between + 15 ° C and + 25 ° C. If you have not any tool to measure the temperature, and the accumulator battery was stored at a lower temperature, leave it at room temperature for at least 10 hours before starting the charging process. The recommended charging voltage is 14.4 V, the maximum allowable charging voltage is 14.6 V at 20° C, with a current (A) not exceeding 1/10 of its capacity.

17. Do not charge the accumulator battery near open flames and heating devices, do not leave it unattended.

18. Before charging the accumulator battery in the vehicle, disconnect the terminals of the vehicle on-board electrical system.

19. Do not use an open flame, do not smoke near the accumulator battery, do not short-circuit the battery terminals with different tools, sparking of contacts is also not allowed.

20. The accumulator batteries should be charged with devices with automatic maintenance of the charging voltage only.

21. Caution! Do not use DC chargers to charge the accumulator battery.

22. Keep children and pets away from the accumulator battery.

REMEMBER!

1. Never add acid or electrolyte to the accumulator battery.
2. After purchasing the accumulator battery, charge it to 100%.
3. If you will follow the operation and maintenance rules, your accumulator battery will serve you for a long time.

ACCUMULATOR BATTERY DISPOSAL

A failed battery must be handed over to the collection point for used accumulator batteries for subsequent disposal.
